

# Enhance the Quality of Care for Your Symptomatic and Asymptomatic Patients

By Enabling Single-Visit Test and Treat with the binx *io* CT/NG Assay

“Providers might consider **opt-out chlamydia and gonorrhea screening** (i.e., the patient is notified that testing will be performed unless the patient declines, regardless of reported sexual activity) for adolescent and young adult females during clinical encounters. Cost-effectiveness analyses indicate that opt-out chlamydia screening among adolescent and young adult females might substantially increase screening, be cost-saving, and identify infections among patients who do not disclose sexual behavior.”\*

*2021 CDC STI Treatment Guidelines*

## binx *io* Chlamydia and Gonorrhea (CT/NG) Assay for Symptomatic and Asymptomatic Patients

- FDA-cleared and CLIA-waived
- Point-of-care molecular
- 30-minute time to result
- Single-visit “test and treat”
- Fully-automated
- Male and female patients
- Integrates with EMR/LIS
- Clear detected/not detected results
